

***Interactive comment on “Characterization of broom fibers for PRB in the remediation of aquifers contaminated by heavy metals” by C. Fallico et al.***

**Anonymous Referee #1**

Received and published: 19 April 2010

My contribution to the discussion concerns to the hydraulic characterization tests of broom fibers (section 2.1). It is not evident which type of fiber was utilized to perform the measurements of permeability, that is if raw fibers or a DiCoDe fibers or, again, if both were used. My opinion is that this aspect, regarding the type of fiber used to determine  $k$ , should be clearly specified in the text.
