Received and published: 14 September 2011

Dear Editor,

Please find files for responses to two referees and revised manuscript bg-2011-187 which includes responses to their comments. Some unfortunate misunderstandings were recognized to have been caused by insufficient explanation in the manuscript. I have carefully answered all of comments by the referees and faithfully modified the manuscript point by point.

Considering the importance of this research, we hope that the report is now appropriate to be published in Biogeosciences.

Please find supplement pdf file for revised text. There are no changes on figures and
C3071

tables from former version.

Sincerely yours,

Sou Matsunaga
