Many thanks for the interest in our work and also for the considerable laude to this manuscript. Of course we have done a very strong quality control. We will include the requested information's. Sandy soils can be found at large areas all over the world, for instance in large parts of Northern Germany. Also at the Wupper River many sandy soils occur. However, we will embed into the conclusion that similiar experiments with silty and clayey soils should be a task for future research. The details we will check carefully and we will correct the requested issues.
