Just a note to ask that when preparing a revised submission for Biogeosciences you pay careful attention to the suggestions of Reviewer 2 in particular. Specifically, please be very clear with the aim of the manuscript, followed up by a clear statement of recommendations at the conclusion of the manuscript. Your suggested aim in "author comments" needs to be further clarified/strengthened. Some of the English improvement can be handled within the journal once it goes for editing but for now you need to focus on being very clear about WHY particular approaches have been chosen, their respective strengths and weaknesses and the potential for SIGNIFICANT improvements in

C2060

accuracy of global accounting through improved IPCC methodologies.
