

Interactive comment on “Organic nitrogen in precipitation across Europe” by J. N. Cape et al.

Anonymous Referee #1

Received and published: 1 August 2012

This MS describes the results of monitoring of atmospheric nitrogen concentration and deposition in the form of water-soluble organic nitrogen (WSON) over several European sites. The study has been conducted in the framework of an international project (NitroEurope). The results obtained on atmospheric WSON are new and interesting. The authors made comparison with relevant literature data. There are a very few technical flaws in the MS, which should be corrected before publication. The manuscript can be accepted in Biogeosciences after minor technical revision.
