

Interactive comment on “Tracing biogeochemical processes and pollution sources with stable isotopes in river systems: Kamniška Bistrica, North Slovenia” by T. Kanduč et al.

Anonymous Referee #1

Received and published: 29 October 2012

As already mentioned, the authors present a very good and solid hydrogeochemical data set, worth to be published in an international journal. However, both the concept, as well as the limitation in used stable isotope systems, make the results probably not as innovative, as expected for a publication in Biogeosciences.
