

***Interactive comment on “Field intercomparison of four methane gas analysers suitable for eddy covariance flux measurements” by O. Peltola et al.***

**Anonymous Referee #1**

Received and published: 24 January 2013

This research on the field intercomparison of four gas analysers provides a unique chance for readers to understand the performance of the main gas analysers suitable for eddy covariance system. The results are quite valuable since there is increasing use of eddy covariance technique for methane flux measurement.

It would be better if the authors add some information about the use of pump for the closed path gas analyzers.
