Received and published: 3 June 2016

We thank Referee #3 for the positive revision. We applied the suggested changes. However, as two reviewers suggested to be more cautious in the age estimates based on vestimentiferan tube length, we included the reference by Cordes et al. (2007) as suggested by Referee #3 but changed the discussion following Referee #1 and #2.

A revised version of the manuscript considering the comments of Referee #1, #2, and #3 as well as the SC3 has been uploaded, including a version with tracked changes.
