We would like to thank Dr. Rivkina for reviewing our manuscript and her suggestions. Below we reply to all recommendations.

Page 6, line 23-24 The DNA samples were stored at -20°C and the pollen samples were stored at 4°C. Recommended: The subsample for following sedaDNA and pollen analysis were stored at -20°C and 4°C, respectively.

Thank you for your recommendation. We feel that this reduces the clarity of the sentence. But we will shorten and rephrase the sentence to: "The DNA samples were stored at -20°C and the pollen samples at 4°C."

Page 6, line 24-25 In total, 54 samples were drilled (approximately 3 to 4 samples per metre) for each kind of analysis. Recommended: meter

Thank you for this suggestion. Before we submitted the manuscript it went through a language correction in which meter was changed to metre for language consistency (British English). Therefore, we will leave it at metre.
