

Interactive comment on “Export of calcium carbonate corrosive waters from the East Siberian Sea” by Leif G. Anderson et al.

Leif G. Anderson et al.

leif.anderson@marine.gu.se

Received and published: 6 February 2017

1 We include the suggested reference to Comeau et al (2010).

2 We expand the text with the notation that the $\text{HCO}_3^-/\text{H}^+$ ratio or just the H^+ are the controlling factors of biogenic calcium carbonate precipitation and include the suggested references.

3 We cite the paper by Haese et al (2014).

4 A sentence describing the consistencies of our measured carbonate system data is included.

5 Finally with regard to the impact of salinity on the solubility of calcium carbonate we are mainly considering its effect on the calcium ion concentration, not on the chemical

C1

equilibrium solubility product or carbonate ion concentration. This is clarified in the next version of the text.
