

Interactive comment on “Export of calcium carbonate corrosive waters from the East Siberian Sea” by Leif G. Anderson et al.

Leif G. Anderson et al.

leif.anderson@marine.gu.se

Received and published: 6 February 2017

1 The depth of where the corrosive water spreads in the deep basin is added.

2 Same as comment 5 by reviewer 1.

3 A discussion on the potential importance of photodegradation is included in the discussion and the text describing the river plume and the exchange of CO₂ with the atmosphere of this water is altered to clarify the message (that we agree is not clear in the submitted version).
