Contents of this file

Supplemental data

Table S1 lists Rock-Eval parameters, original and corrected $\delta^{13}C$, Cu and Zn concentrations, C/N ratios, and MAS. And Table S2, S3, and S4 list concentrations of neutral carbohydrates, correlations among neutral sugars and heavy metals, and correlations among T_5, Rock-Eval parameters, monossachrides, original and corrected $\delta^{13}C$, and diagenetic parameters in the sediment cores, respectively.

Figure S1 illustrates physicochemical properties in water column. Figure S2 shows the sources of neutral sugars. Figure S3, S4, and S5 show vertical profiles of diagnostic parameters of neutral sugars, PCA analyses and annual daylight during 60 years, respectively.

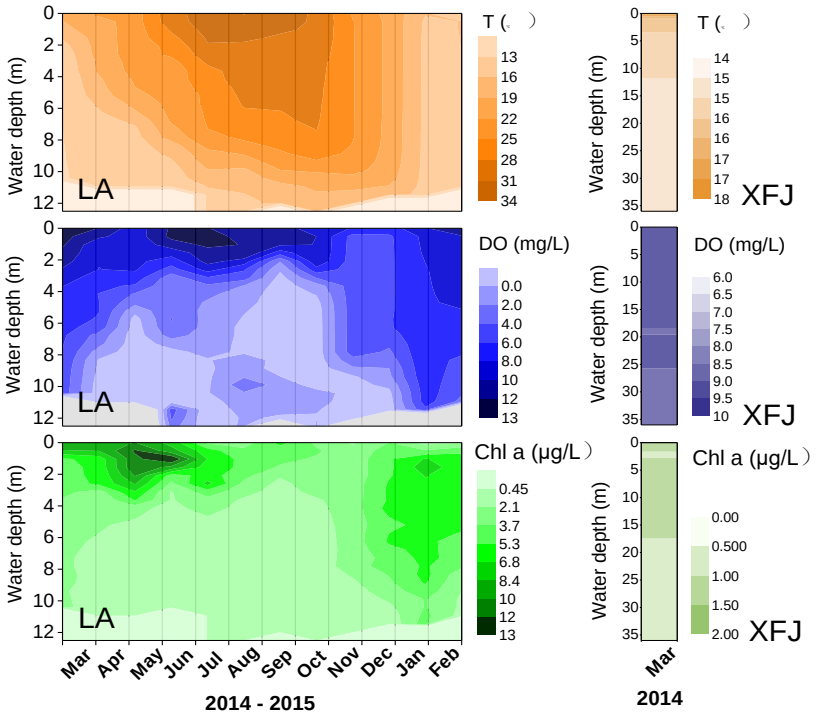

Figure S1. Physiochemical properties of water in LA and XFJ reservoirs

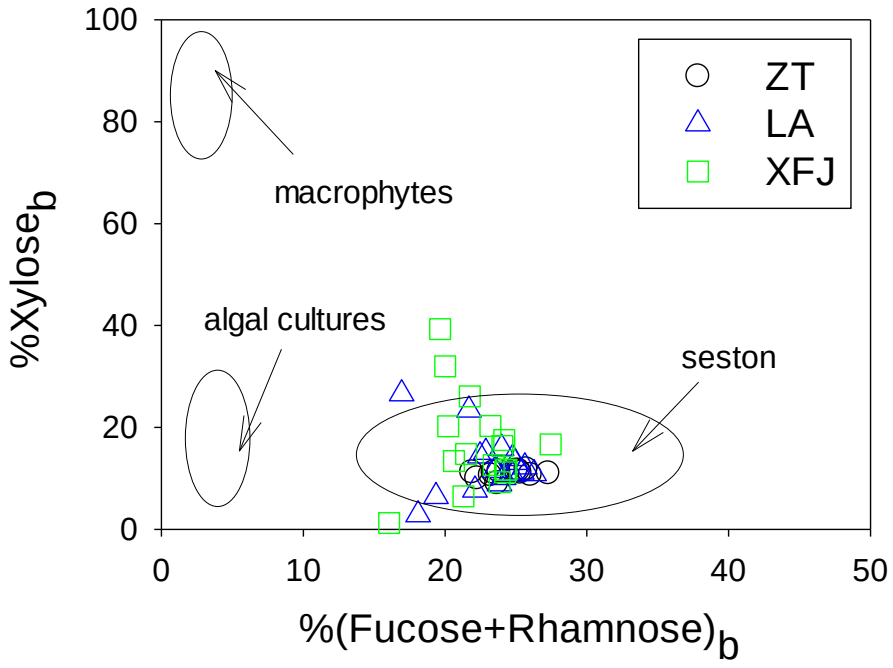

Figure S2. Plot of weight %xylose$_b$ against %(Fucose + Rhamnose)$_b$ in the sediments of three reservoirs

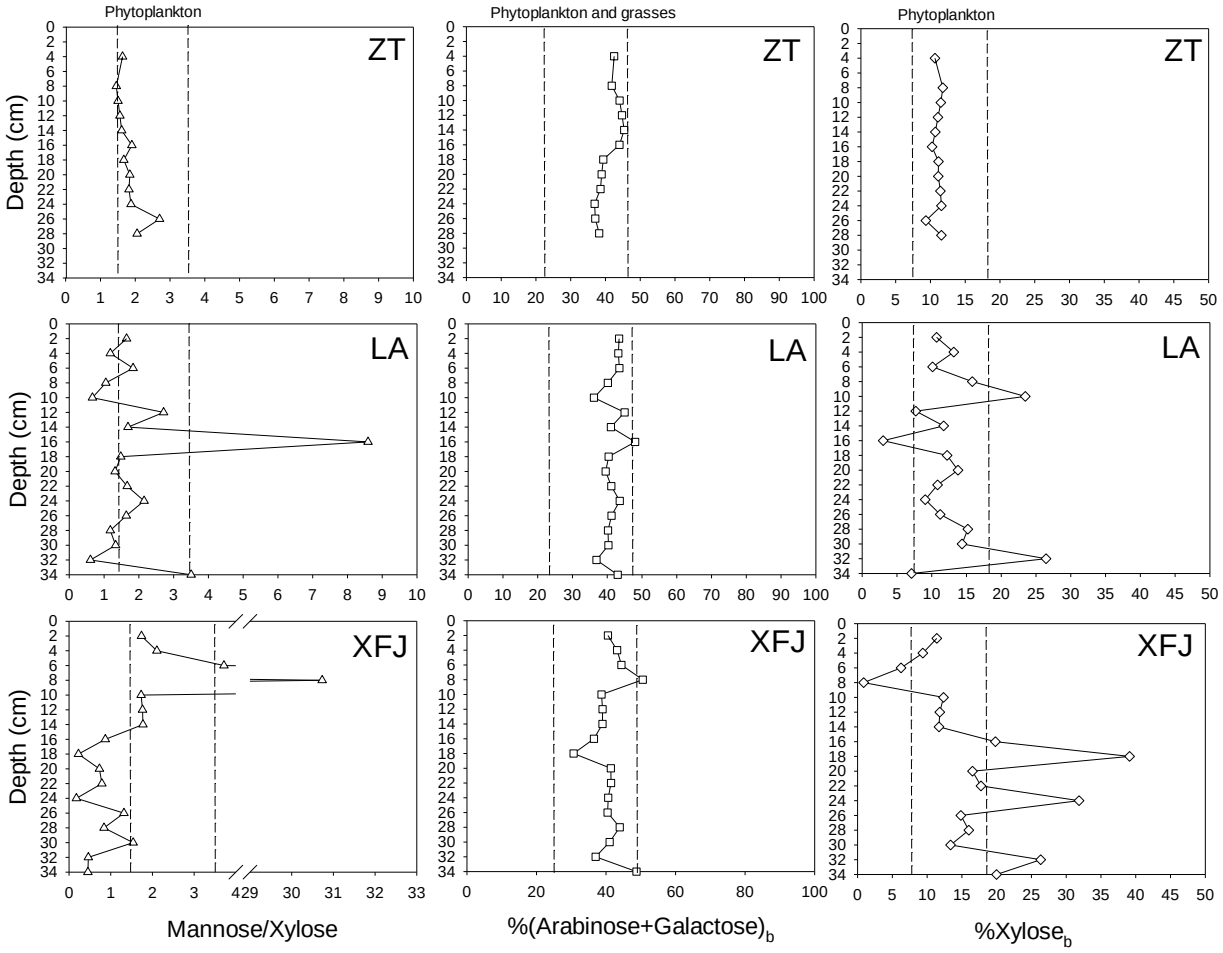

Figure S3. Vertical profiles of ratios and parameters of carbohydrates in sediment cores from three reservoirs

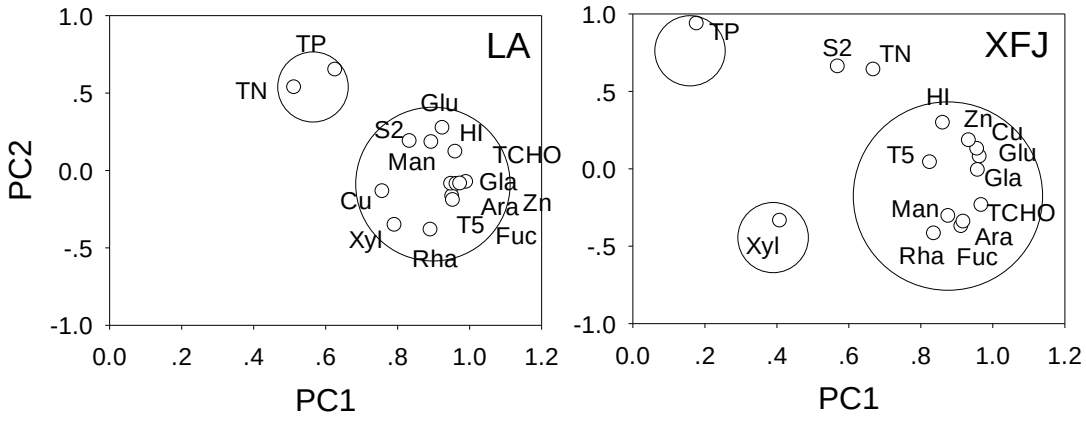

Figure S4. Principal component analysis of parameters in LA reservoirs.

Note: Only one principal component was extracted by the PCA analyses in ZT samples

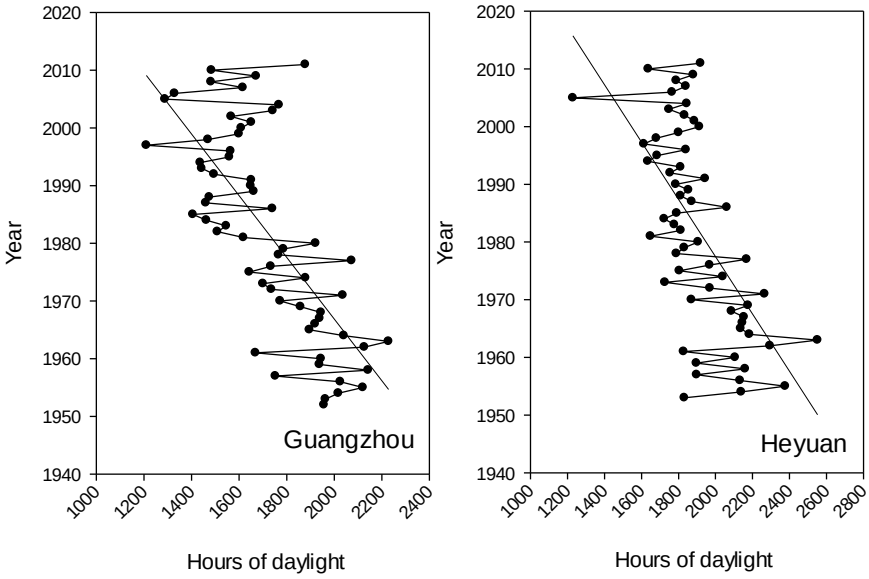

Figure S5. Annual hours of daylight at Guangzhou and Heyuan areas

Table S1. Summary of OM parameters, heavy metal concentrations, carbon isotopic values, and mass accumulation rates.
