

Supplement

S1 Impact of parameter correlation on ET attribution to radiation

5 As outlined in *Sect. 2 Data & methods*, we performed an analysis of the respective contributions of the additive terms in the linear models. We exemplified this with a simple linear model

$$Y = a_1 \cdot X_1 + a_2 \cdot X_2, \quad (\text{S1})$$

10 where Y denotes the dependent variable, a_1 and a_2 denote parameters and X_1 and X_2 are two explanatory variables. We can calculate the contribution of a variable X_i as

$$f_{X_i} = \frac{\sum a_i \cdot X_i}{\sum a_1 \cdot X_1 + a_2 \cdot X_2}. \quad (\text{S2})$$

15

In many realistic examples, the model parameters a_1 and a_2 are not perfectly identifiable. This could be due to the correlation of X_1 and X_2 or more fundamental model structural uncertainty. In these cases, f_{X_i} is confounded by the parameter correlation a_1 and a_2 , leading to a high uncertainty of its estimation. To evaluate this effect, we estimated the contribution of the described within-site uncertainty of f_{X_i} . The variance-covariance matrix (V) of the parameter estimates could be

20 calculated for each site with the results of the regression. Consequently, V can be used to derive the respective posterior parameter distributions, from which we sampled 200 parameter vectors per site, representing the uncertainty and correlation of the two parameters. Site-specific vectors $f_{X_i,S}$ can be calculated as

$$f_{X_i,S_j} = [f_{X_i,S_j,p_1}, f_{X_i,S_j,p_2}, \dots, f_{X_i,S_j,p_{200}}], \quad (\text{S3})$$

25

where p_1 to p_{200} denote the 200 realizations of parameter vectors and s_j denotes a specific site.

Based on this, we tested whether the global variance of f_{X_i} is a product of differing means of the site-specific $f_{X_i,S}$ vectors or their variances. For this, we performed an ANOVA along the sites as categorical variable with the parameter realizations as

30 random replicates.

S2 Overview over all FLUXNET sites used

Table S1 contains an overview of all FLUXNET sites used in our analysis. A full description of all FLUXNET sites can be found at <http://fluxnet.fluxdata.org/sites/site-list-and-pages/>

Table S1. Overview of all FLUXNET sites used in our analysis.
