We thank Referee #2 for the valuable comments on our manuscript. We agreed in all aspects and implemented all the suggested corrections. Major changes have been introduced to our manuscript. In particular, we renamed the manuscript as "Potential sources of variability in mesocosm experiments on phytoplankton response to ocean acidification" to accurately reflect the content of the paper. We think that the revised manuscript is more coherent and clearer with respect to our approach and our results. Many refinements in our manuscript involve the validity of the method, also inspired by comments of Referee #1.
