20 **Fig. S1.** Cumulative  $^{13}\text{C}$  emissions (% initial  $^{13}\text{C}$ ) of rice paddy soils treated with different  $^{13}\text{C}$ -labelled  
21 carbon substrates over a 300-d incubation. Values and error bars represent the means  $\pm$  SE (n = 4).  
22 Shoot-C, unlabelled paddy soil containing  $^{13}\text{C}$ -labelled shoot residue; Root-C, unlabelled paddy soil  
23 containing  $^{13}\text{C}$ -labelled root residue; Rhizo-C, paddy soil containing  $^{13}\text{C}$ -labelled rice rhizodeposits;  
24 Micro-C, paddy soil containing  $^{13}\text{C}$ -labelled microbial-assimilated C.
