Table S5. Results of the selected GLMMs testing for the effects of temperature, N:P supply ratios and  $p\text{CO}_2$  on fatty acid contents in *Emiliana huxleyi*. Significant  $p$  values are shown in bold. T: temperature; N:P: N:P supply ratio; TFA: total fatty acid; SFA: saturated fatty acid; MUFA: monounsaturated fatty acid; PUFA: polyunsaturated fatty acid; DHA: docosaheptaenoic acid (22:6n-3).
