Dear Reviewer,

Thanks a lot for your review! I have been looking through and I would just like clarification on one point. One of your very first comments (under the specific comments) reads: "...the 6 or so pieces serving as subsections of the results. More text on background and motivation could be added to the introduction for each, including more references for previous studies that have explored these issues."

I can't tell whether your suggestion would be to add some text on each aspect in the

[Printer-friendly version](#)

[Discussion paper](#)

overall introduction, or to add the text in the results section at the start of each subsection. I think that either could potentially work, but it would be great to know what you were thinking of!

Thanks and best wishes, Sarah
