I will try to upload the marked changes again. In case I fail again, here are the changes as requested by the reviewers:

Title: changed to Calcium carbonates: Induced biomineralization with controlled macromorphology

Abstract: macro-morphologies changed to "morphologies" aoitic changed to "abiotic"

Introduction: citation included: "(Castanier et al., 1999)".

Material and Methods, 2.5 Quantification: included the calculation basics: "For calcultation of yearly biomineral formation, we used the amount produced in our cultures

(approx. 100 mg) during the time of incubation (3 weeks) to calculate how much this would make in 52 weeks, a full year. 1700 mg would be the result of such an approximate calculation for new mineral formation during a year. This is an underestimation, since the nucleation time is needed only once."

Again, we thank the reviewers for their valuable comments!
