Received and published: 5 December 2017

Please note the corrected version of the reply to the comment : lines 134-135: The authors should provide evidence for their statement that the contribution of the air-sea flux is insignificant. This is well discussed for the years 1998-2000 in Begovic and Copin-Montegut, 2002 .For the period 2013-2015, the air –sea flux is equal to  $-0.45\text{mol m}^{-2}\text{yr}^{-1}$ , a value close to what was observed in previous years. This is indicated in the manuscript. In the previous document it was written  $-0.45\text{mmol m}^{-2}\text{d}^{-1}$
