As suggested by Referee 1, I used the term 'cyanobacterially-dominated' biocrust. Well, a number of colleagues, all native English Speakers (Great Britain, New Zealand, Australia, USA), suggested not to convert the noun 'cyanobacteria' to an adjective. As I am not a native English speaker but my coauthor is, I will accept her strong suggestion not to use 'cyanobacterially-dominated' and com back to the use of 'cyanobacteria-dominated'.
