Received and published: 6 January 2018

Dear Authors

you have received two careful reviews from two out of three possible referees. Both raise concerns about the novelty of your work and give clear explanations why. I'm convinced that you deem your work being a novel development from previous work, but it looks as if this was not yet expressed in an optimal manner in your manuscript. I'd like to encourage you to use the interactive discussion to sort out with the referees, where the presentation didn't work out well. You are welcome to use the interactive discussion to comment and ask on particular, important aspects in order to receive immediate, constructive responses and clarifications, where necessary.
