

Interactive comment on “Application of the ACASA model for a spruce forest and a nearby patchy clearing” by Kathrin Gatzsche et al.

A. Ibrom (Editor)

anib@env.dtu.dk

Received and published: 25 January 2018

Dear referees and authors

I have asked for re-opening the interactive discussion for another 14 days in order avoid a slow and tiring iteration process.

Referees, please comment on the recent authors comment but only on the most essential reservations, that you still might have. The more focused the better!

And Authors, please use this opportunity to directly discuss with the referees and locate the main critical remaining aspects. The more focused the better!

Let's hope that this experiment works!

C1

Thank you very much for your cooperation.

Best wishes, Andreas
