

Interactive comment on “Atmospheric nitrogen deposition to terrestrial ecosystems across Germany” by Martijn Schaap et al.

Anonymous Referee #1

Received and published: 10 January 2018

On December 10th I pointed out that the Supplementary was missing, as was information needed to trace some of the references (the most important being Wichink Kruit et al. 2014, whose methodology seems to be important for this paper). The authors have ignored my comment, which is unacceptable in a discussion forum. As a referee I was expecting this information well within the normal 8 week review process. As it is now, little time remains, and I suggest the paper is rejected for now and re-submitted once all materials are provided.
