

Interactive comment on “The Oligotrophy to the UTRa-oligotrophy PACific Experiment (OUTPACE cruise, Feb. 18 to Apr. 3, 2015)” by Thierry Moutin et al.

Anonymous Referee #2

Received and published: 8 May 2017

This manuscript is intended as the introduction to a special volume with results from the OUTPACE cruise. It thus has very few data, but describes the background and purpose of the cruise and lists the stations with some characteristics. As an ordinary publication of original research, this would not work, but I clearly see the need for this type of introduction to a special volume so that this type of information does not need to be repeated in each paper.

Adding more results could obviously give a more complete and interesting story, but would both "steal" points from the research papers and decrease the role of this ms as an introduction.

I conclude supporting the authors' choice of this form of the publication and have no

C1

suggestions for improvement.
