

Interactive comment on “VPRM-CHINA: Using the Vegetation, Photosynthesis, and Respiration Model to partition contributions to CO₂ measurements in Northern China during the 2005–2009 growing seasons” by Archana Dayalu et al.

Anonymous Referee #2

Received and published: 31 July 2018

General comments: This manuscript reported on parameters adapting and model diagnosing of VPRM-CHINA for the eastern half of China. This paper is a well-presented and scientifically sound study and I recommend it for publication after minor revisions. However, I think the title ‘...Using the Vegetation, Photosynthesis, and Respiration Model to partition contributions to CO₂ measurements ...’ is not very proper for this paper: VPRM-CHINA model isn’t able to partition contributions of CO₂ concentration. A more scientific title should be needed for this manuscript.

C1

Specific comments: P9 Table 1 Please explain clearly what is meant by ‘CN’ or ‘KR’). P11 L11 Please describe how to scale annual gridcell emissions (as Gg CO₂) to $\mu\text{molCO}_2 \text{ m}^{-2}\text{s}^{-1}$
