Received and published: 28 September 2018

We thank the referee for their comments. The referee expressed concerns about the way the experiments were designed and presented. We tried to respond to all comment and questions. In particular, we made efforts to improve the evaluation of the model results and provided more quantitative analyses of the results. We also reorganised the results section, changed some figures and added new ones in order to make the article easier to read.

All answers to questions and comments are presented in the joint files. We also join a revised version of the manuscript with a track version allowing to follow changes made
