Dear Editor The reviewer No 2 also positively evaluated our manuscrit and issued only a few technical corrections:

3.1 I found one erratum on page 9, lines 219-221. "Generally, a 2 to 3-fold decrease (instead of increase) in Corg . . .." Answer: We thank the reviewer for pointing thi sout and we already corrected this misprint.

3.2 I should wish to include into the text the tables and figures that are given under index

S (supplementary materials). I think the volume of the paper will not be much higher but the readers may have more simple access to the factual additional unpublished data Answer: We agree with this proposition, which was also put forward by 1st reviewer. In case if we invited to submit the revised manuscript, we will gladly incorporate most of Supplementary Information into the main text. We are ready to submit the revised version. Sincerely Oleg Pokrovsky
