

g-2018-258 Submitted on 31 May 2018 –Revised version

Export flux of unprocessed atmospheric nitrate from temperate forested catchments: A possible new index for nitrogen saturation

Fumiko Nakagawa, Urumu Tsunogai, Yusuke Obata, Kenta Ando, Naoyuki Yamashita, Tatsuyoshi Saito, Shigeki Uchiyama, Masayuki Morohashi, and Hiroyuki Sase

The authors thoroughly revised their manuscript following most of the comments. As result I think the paper is now acceptable for publication. Yet, in the process of reviewing the revised ms I found some new typos:

P5-L1: ‰ is missing.

P8-L19: twice (not thrice).

P14-L8: there is something wrong with this sentence, too many copy and paste I guess.

This means there will be minor revisions so I take this opportunity to ask again:

- 1- Please give the units for each Equation.
- 2- In the discussion please specify to which category (catchment groundwater, through flow) belongs the water sampled in SLS and SMS.
- 3- A figure showing the relationship between $Matm$ and stream NO_3 conc. would be welcome to support your statement P23-L20-21.
