Received and published: 5 November 2018

In line 15 on page 6, the authors wrote that "In addition, the processes of N deposition, mineralization, and denitrification were also modeled." The detailed modeling approaches for these processes might have been included in the previous publication of the TEM model already, but I think the authors perhaps should present them at least briefly here. Especially, I cannot find how the authors obtain the N deposition data. And how it is incorporated in the models.
