Received and published: 20 February 2019

Thank you for considering our manuscript for publication in Biogeosciences. We have modified the manuscript to address the comments of the reviewers, and it is now greatly improved. Specifically, we modified the title and added information about the regional climate and site variables (i.e., slope and aspect) requested by one reviewer regarding the sampling sites. Additionally, we have more clearly identified the focus of the study by clarifying the major shortcomings in the literature that we address in the study. We added an additional table (i.e. Table 2) containing the principal component loadings to simplify the discussion.
