Interactive comment on "Review of key causes and sources for N$_2$O emissions and NO$_3$-leaching from organic arable crop rotations" *by* Sissel Hansen et al.

Anonymous Referee #2

While there is merit in the work, I think the paper needs a lot of work before it is ready to publish. Many of the points raised are not comprehensively explored or the explanations are not sufficiently considered. Work in this area could enhance the paper. I think the tables also need further work. I think the tables should be included in the main paper but in a revised format
