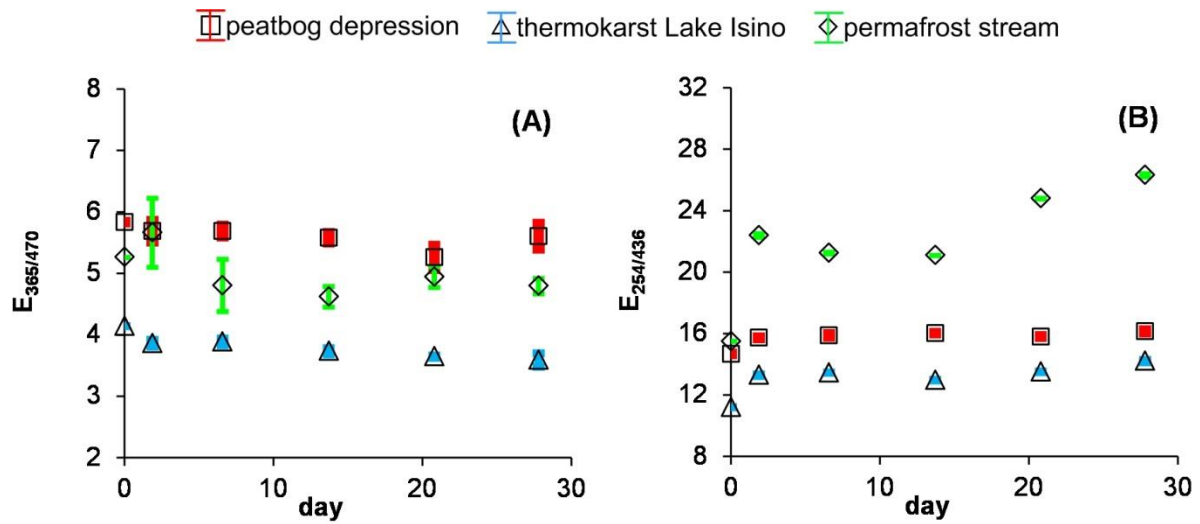

Fig. S2. UV absorbency at 254 nm in biodegradation experiments. The error bars are 1 s.d. of triplicates.

32

33 **Fig. S3.** Number of colony-forming units of oligotrophic bacteria at 23°C in GF/F-filtration
 34 experiment of 'classic' protocol (A), at 4°C and 23°C in alternative (3 µm – filtration)
 35 protocol (B and C, respectively), and total bacterial count (DAPI-based) in GF/F-filtration
 36 experiment (D), where bacterial morphological structure (cocci and rods) is shown. The error
 37 bars are 1 s.d. of triplicates.

Fig. S4. The optical properties of DOC during photodegradation experiments: E_{365}/E_{470} ratio corresponding to UV/vis absorbing functional groups **(A)**, and the E_{254}/E_{436} ratio, corresponding to autochthonous vs. terrestrial DOM **(B)**. The error bars are 1 s.d. of triplicates.
