Dear Dr Saulnier-Talbot

Thank you very much for your review of our manuscript. We are grateful for the positive feedback. This motivates us a lot. We also acknowledge your suggestions for further analyses and detailed comments that helped to improve the quality and readability of the manuscript. We already performed radiocarbon analyses of the surface sediments and can provide basic assessments of a reservoir effect. We also can work on an assessment regarding the lake residence time. We plan upload all data used in this manuscript to PANGAEA and we can also include more graphs on bioindicators in the

C1

supplementary material

We would like to prepare detailed revision notes and a point-to-point answer to each of your comments as soon as possible.

We highly acknowledge your efforts. With kind regards, Boris Biskaborn
