Received and published: 1 August 2019

Dear Referee #1,

We are very grateful for the detailed and valuable comments on our manuscript. We are confident that we can address most of the comments satisfactorily. Special emphasis will be put on a proper biogeochemical discussion of mineralization and in-stream processing to better demarcate DOC net production. This will greatly strengthen our proposed conceptual model. Our point-by-point response to the comments is available by the link below, with the reviewer's comments (black) quoted first and followed by our response (red).
