

Interactive comment on “Carbon-concentration and carbon-climate feedbacks in CMIP6 models, and their comparison to CMIP5 models” by Vivek K. Arora et al.

Anonymous Referee #1

Received and published: 30 December 2019

I did not find any obvious errors or omissions in the manuscript, but I believe that the abstract should report the mean values of the concentration-carbon and carbon-climate feedback parameters for land and for the ocean calculated using the fully-coupled configuration.

Besides, I would recommend to revise the first abstract of the 'Introduction' if the authors would have some spare time. I think it would be better to replace it with a brief historical overview of the climate feedbacks problem citing some seminal work on this subject.
