

Supplementary Information for “Co-occurrence of Fe and P stress in natural populations of the marine diazotroph *Trichodesmium*.”

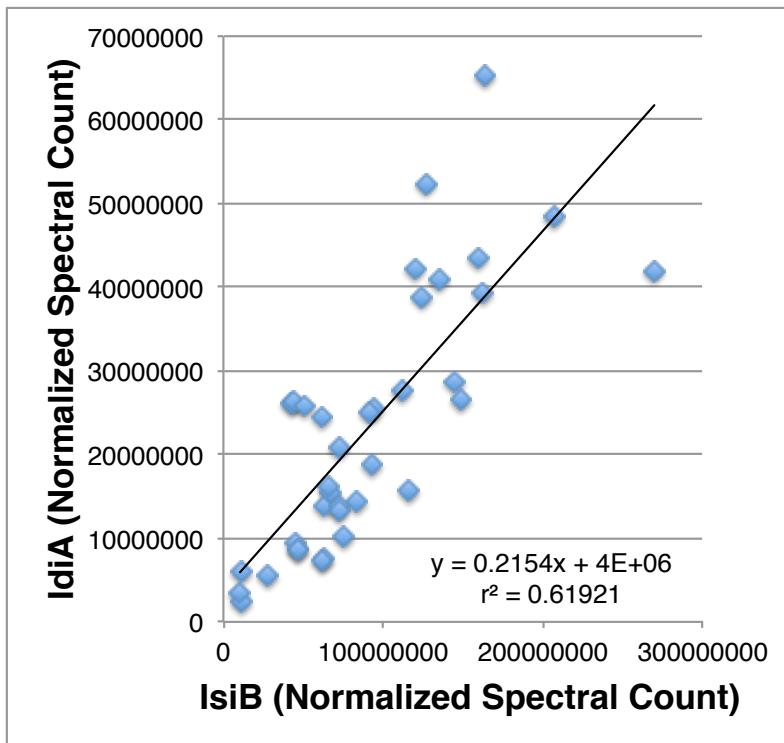

Figure S1. Relative abundance of IdiA and IsiB. Both are biomarkers of iron stress in *Trichodesmium*, and behave similarly in this dataset.

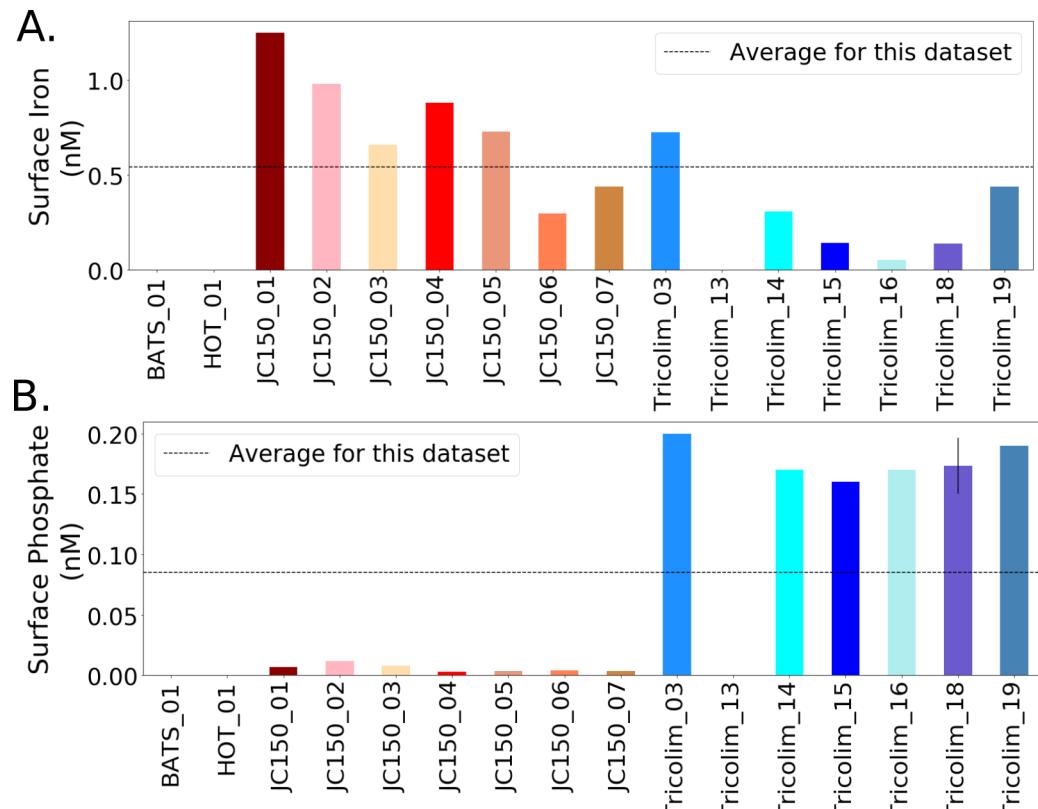

Figure S2. (A) Surface iron and (B) surface phosphate distributions at each location, where measured. Note nutrient data is lacking for BATS, HOT, and Triclim_13. Dashed lines represent average values across the dataset. The phosphate data for the JC150 cruise has been previously published and was measured at the nm scale.⁶⁸ Note that the phosphate concentrations from the Triclim cruise were not measured at the nm scale and were below the detection limit.

*Note: Tables S3, S4, S6 are provided as excel files due to their large size
