

Supplementary Material

Table S1. Phosphorus sorption index (PSI, L kg⁻¹ soil) calculated at four levels of P addition levels ($n = 4$).

Site	Position	Treatment	500 mg P kg ⁻¹	1000 mg P kg ⁻¹	5000 mg P kg ⁻¹	10,000 mg P kg ⁻¹
El Verde	Slope	Anoxic	616±70a	505±14a	1018±19a	1513±31a
Verde	Valley	Oxic	363±18b	405±14b	877±29b	1236±27b
		Anoxic	637±86a	740±28b	1622±62a	2079±109a
Rio Icacos	Slope	Oxic	-385±152b	1229±147a	1408±16b	1893±62a
		Anoxic	1552±267a	785±59a	972±25a	1398±17a
Icacos	Valley	Oxic	783±21b	565±5b	614±48b	967±29b
		Anoxic	12143±4275a	1257±150a	1218±26a	1883±157a
		Oxic	-1635±2527b	954±53a	1073±59a	1266±157b

4 Different letters indicate significant differences at $\alpha = 0.05$.

5 Table S2. Saturation index of vivianite calculated by Visual MINTEQ using soluble Fe(II),
6 inorganic P, and solution pH as input. Results from slope soils from El Verde under anoxic
7 conditions are shown. Bold values indicate oversaturation.

P loading rate (mg P kg ⁻¹ soil)	500	1000	5000	10,000
Average HCl-Fe(II) (mg g ⁻¹ soil)	3.4	3.4	3.4	3.4
Estimated water-soluble Fe(II) (mg L ⁻¹) ^a	34	34	34	34
Average P in solution (mg P L ⁻¹)	5.5	26.4	249.5	571.3
Soil pH ^b	5.9	5.9	5.9	5.9
Saturation index ^c	3.5	4.8	5.9	5.9

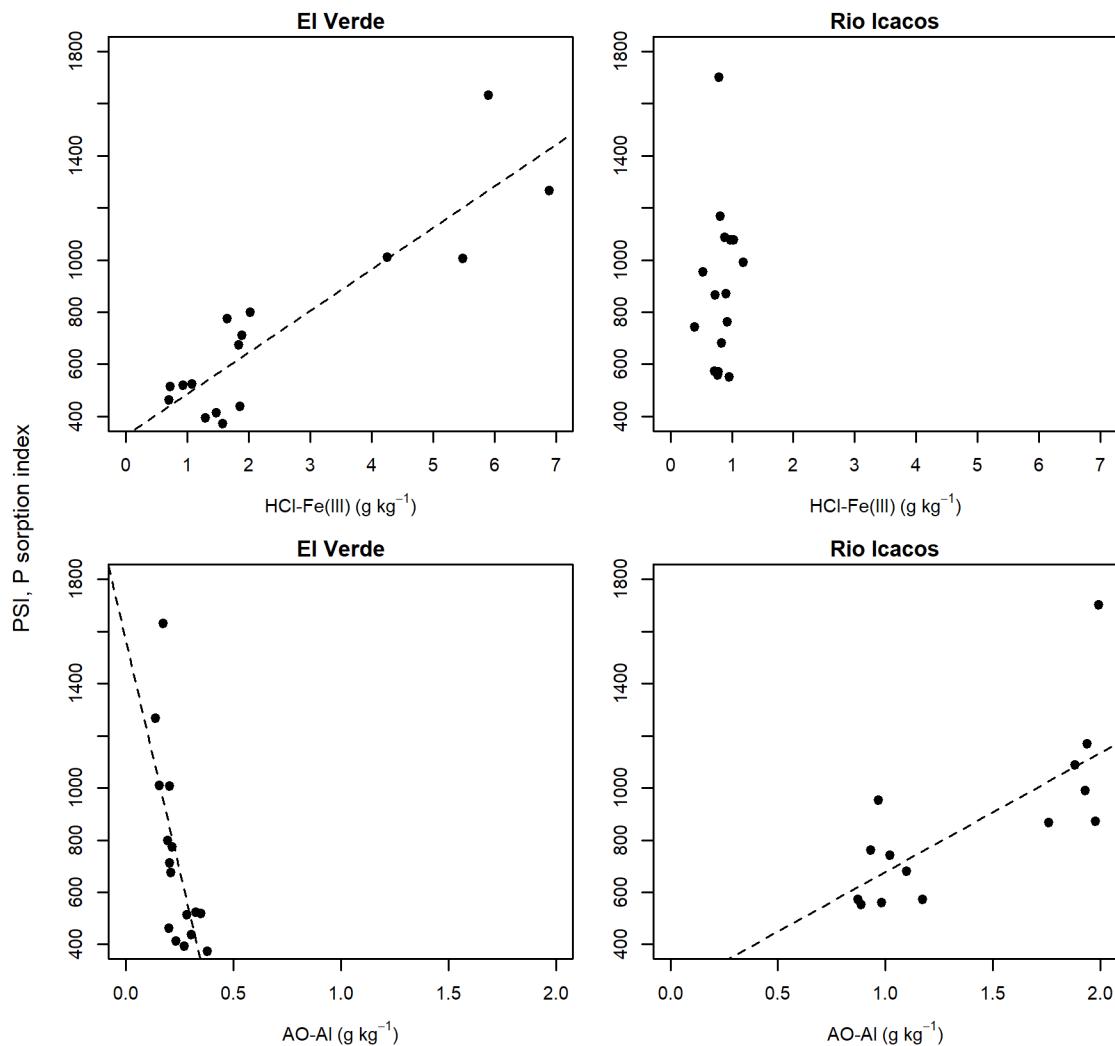

8 ^a Peretyazhko and Sposito (2005) found that ~10% of the HCl-Fe(II) was soluble in H₂O in a
9 similar soil after anaerobic incubation, which is consistent with Fe(II) sorption reported by
10 Wilmoth et al. (2018); the soil:water ratio was 1:10 (mass:volume).

11 ^b estimated based on similar soils (Lin et al. unpublished)

16 Figure S1. Correlations between phosphorus sorption index (PSI) and soil HCl-extractable
17 Fe(III) (HCl-Fe(III)) and ammonium oxalate-extractable Al (AO-Al) concentrations at El Verde
18 and Rio Icacos. Dash lines indicate significant correlations.

19

20

21 Figure S2. Percent changes of soil NaHCO_3 -extractable total P ($\text{NaHCO}_3\text{-P}_t$) concentration,
 22 NaOH -extractable total P (NaOH-P_t) concentration, and phosphorus sorption index (PSI) in
 23 response to anoxic conditions. Error bars indicate 95% confidence interval. EV-2 refers to the 2nd
 24 sampling of El Verde soils for measuring the solubility of sorbed P.
