

Interactive comment on “Fatty acid carbon isotopes: a new indicator of marine Antarctic paleoproductivity?” by Kate Ashley et al.

Anonymous Referee #1

Received and published: 3 July 2020

The authors suggest that "changes will be made" - does that mean they have been made in the resubmission? Crucially, the response does not detail where changes have been made. This should be shown with either indicative line numbers or reference to a tracked changes manuscript. Please resubmit this response with the necessary detail so the resubmitted MS can be evaluated accordingly as this is currently not possible.
