On a purely technical note, I would suggest that the authors adapt the color palettes they use for their figures. For many of the plots the colors are indistinguishable in grey-scale and, thus, for colorblind people. This applies to Figs. 3-5, 8 and 9. Figure 6 lacks a legend.

I am not familiar with ODV color palettes, so I can't give advice for Figs. 3-5. The other figures seem to be produced with MatLab, for which the authors could either use the 'new' default color palette parula or any of the cmocean color palettes (<https://uk.mathworks.com/matlabcentral/fileexchange/57773-cmocean-perceptually-uniform-colormaps>). For Fig. 9, it would suffice to add different markers

C1

to the different lines.
