We discussed Dr. Baker’s comment #2 further, in which he suggests that we change "IP" and "DP" to "up arrow W" and "down arrow W" as "P" can be confusing with phosphorus. While we understand the reason for the suggestion, "W" can also cause confusion in the global change community as "W" often refers to warming. We also see IP and DP used in other literature (such as Zhou et al. 2018), and we believe that IP and DP would not cause significant confusion, especially that we clearly define IP and DP in the text and each figure’s caption. We highly appreciate his suggestion, but we decided to keep IP and DP.
