

Interactive comment on “Impact of bottom trawling on sediment biogeochemistry: a modelling approach” by Emil De Borger et al.

Emil De Borger et al.

emil.de.borger@nioz.nl

Received and published: 9 December 2020

We thank the reviewer for the time taken to read and positive comments on the manuscript. We were happy to elaborate on the methodology of deriving bioturbation rates, and to implement the suggested changes to figures and tables. In addition, we took up the suggestion to make a sort of summary figure, to serve as the figure for the abstract. In the attachment you can find our replies to all comments. With these changes, we hope to have replied to this review in a satisfactory manner.

Please also note the supplement to this comment:
