Received and published: 15 January 2021

We greatly appreciate the constructive and supportive comments provided by Duarte. We consider that these comments provide a fair and accurate assessment of the importance of response variability in ocean acidification research, and such how this can be best be addressed and interpreted in experimental studies. We also endorse Duarte’s concluding call for collaborative effort. Whilst we intend that our revised manuscript should reflect these views, we do not identify any criticisms requiring specific responses.
