

Response to Editor's Comments

I have given your revised manuscript another look, and think that it should become acceptable after some further revision of the text. Please give the manuscript a careful read and improve the phrasing / wording to increase readability and clarity as much as possible. To illustrate my point, I have highlighted some critical passages in the introduction and legend of Fig. 1 in the attached file.

Furthermore I ask you to add a concise conclusion section, which highlights the main insights of your study in relation to the hypotheses and ends with a broader perspective.

Thank you for your input on the readability and clarity of the writing. This prompting has helped to clarify the text throughout after a thorough review of both the main manuscript and the supplemental materials.

The final discussion section 4.3 originally contained the main insights from the study as well as the broader implications and perspective. Therefore, that section was edited to more clearly place those in relation to the hypotheses originally posed, and the section was renamed as the conclusion.
