

Interactive comment on “Spatiotemporal patterns of N₂ fixation in coastal waters derived from rate measurements and remote sensing” by Mindaugas Zilius et al.

Anonymous Referee #1

Received and published: 12 January 2021

I am pleased to see that you have now met all my comments in a good way. I have no further comments on the manuscript except for that in the last comment you said the N₂ fixation rates for the Bothnian Sea in mol instead of what I think should be mmol?

I am also pleased to see that the graphs with biomass/N₂fixation/heterocysts now make sense after you found that error in the previous version of your figure.
