I liked this manuscript quite a bit, as it addresses the issue of spatiotemporal heterogeneity in fish exposure to hypoxia and sublethal hypoxia. I made quite a few comments and edits directly on the pdf, which I will upload. (It's labeled bg-2020-51-supplement.pdf.) Please note to look carefully for the comments made in yellow highlighter as well as the "bubble" comments, and also look carefully for inserted words and deletions - those tend to be more difficult to see, I think.

I would be willing to look at the revision, if my time permits.
