**Table S1:** Basic properties of bulk soil samples and result of the fractionation: pH (measured in H<sub>2</sub>O), EC (μS cm<sup>-1</sup>), bulk density (g cm<sup>-3</sup>), C (mg g<sup>-1</sup>), N (mg g<sup>-1</sup>), C/N ratio and the distribution of SOM fractions (mg g<sup>-1</sup>) for the bulk soil samples of all analyzed depth layers. The particulate organic matter fractions are free (fPOM), occluded (oPOM) and small occluded (oPOMs) particulate organic matter.
