Dear Referee#1,

You may find the response to your deep and thoughtful comments in the separate Author's Comment entry.

By means of this note I would like to amend one statement made in there. About the comment P6 L96-97, I wrote that the solution was implicit for both  $h$  and  $S(h)$  and  $T(h)$ . However, it was only implicit for  $h$ , and explicit for  $S(h)$  and  $T(h)$ : as you pointed out in your comment, the value of the beginning of the time step was used to solve the discretized equation.

Best regards,

C1
