Suggestion for new version of Figure 7:

Comparison of Figure 7 a and b with separate function for conifers and broadleaved trees compared with the combined function (not intended to be included in the manuscript):

Relationship of [Ca], with SLA for individual trees (as Figure 7a in our original manuscript but for Ca) and for the different species (new version of Figure 7a) – these figures are for comparison with another element and not intended to be included in the manuscript.
