

1. Thank you for raising the question of whether our Fig. 1d is accessible to colour-blind readers – we agree that this is an essential consideration. We put the figure through a simulator and we think that all the important features are clearly visible so the figure can be correctly interpreted:

We also checked that the figure caption and discussion in the main text do not refer to specific colours.

2. The data DOI now appears to work. The data repository was temporarily offline for maintenance when it was checked.

3. Figure 1 is original and our own work.

Figure 1a includes part of an image from Natural Earth Data, which may be freely reproduced without citation: <https://www.naturalearthdata.com/about/terms-of-use/>.

Figure 1b uses data from GEBCO, which is correctly cited in the caption.

Figures 1c and 1d include only our own data.
