60

61 Sensibility tests

62

63 We quantify how much the uncertainties in the fractions of the biological process (dark respiration,
 64 photorespiration and the Mehler reaction) could affect the values of dark respiratory and
 65 photosynthetic fractionation coefficients determined in our study (Tables S5, S6 and S7). For this, we
 66 start from the values given by Landais et al. (2007): f_{dark_respi} (0.6), $f_{photorespi}$ (0.3) and f_{Mehler} (0.1)
 67 and varied the fractions as indicated in Table S5 (tests 0, 1 and 2).

68 In addition, we did other tests for uncertainties in the values of the fractionation coefficient of
 69 photorespiration given by Helman et al. (2005) (test 3 in grey columns of Tables S5, S6 and S7). The
 70 initial values for photorespiration isotopic discrimination are respectively -21.3 ‰ and -11.07 ‰ for
 71 $^{18}\varepsilon_{photo_respi}$ and $^{17}\varepsilon_{photo_respi}$ as given by Helman et al. (2005). From uncertainties on these values
 72 of 0.5 ‰ and 0.3 ‰ for $^{18}\varepsilon_{photo_respi}$ and $^{17}\varepsilon_{photo_respi}$ (Helman et al., 2005), we used alternative
 73 values of -20.8 ‰ and -11.04 ‰ for $^{18}\varepsilon_{photo_respi}$ and $^{17}\varepsilon_{photo_respi}$. For the Mehler reaction we also
 74 chose the value proposed by Helman et al. (2005): $^{18}\varepsilon_{Mehler} = -10.8$ ‰ and $^{17}\varepsilon_{Mehler} = -5.7$ ‰. We
 75 did not test the uncertainty on fractionation coefficients of the Mehler reaction as given by Helman et
 76 al. (2005), because the uncertainties are very small.

77

78

79 **Table S4. Details of input parameters for sensitivity tests. White columns detail the tests on the**
 80 **fractions of oxygen consumption and isotopic discriminations; grey column details the test on the**
 81 **values of isotopic discrimination.**

82

83

	Test 0	Test 1	Test 2	Test 3
f_{dark_respi}	1	0.9	0.4	0.6
f_{photo_respi}	0	0	0.5	0.3
f_{Mehler}	0	0.1	0.1	0.1
$^{18}\varepsilon_{photo_respi}$	-21.3	-21.3	-21.3	-20.8
$^{17}\varepsilon_{photo_respi}$	-11.07	-11.07	-11.07	-11.04
